

SADEV SABUDDHIKA

Cloud & DevOps Engineering Intern

Homagama, Sri Lanka | +94 76 310 2176 | sadevsabuddhika89@email.com

[LinkedIn Profile](#) | [GitHub Profile](#) | Portfolio: sadevsabuddhika.tech

PROFILE

Detail-oriented and proactive Information and Communication Technology undergraduate with a strong foundation in cloud computing, serverless architectures, and automation. Proven experience in designing, deploying, and securing cost-effective, two-tier serverless applications on Microsoft Azure. Adept at streamlining backend APIs, managing relational and NoSQL databases, and optimizing workflows through Git/GitHub. Passionate about cloud infrastructure, scripting, and system administration, looking to leverage hands-on technical skills in a Cloud, DevOps, or Cloud Administrator Internship.

EDUCATION

Bachelor of Information and Communication Technology (BICT) Hons

Sep 2023 - Present (UG)

Specialization in Computer Networks

Faculty of Computing & Technology, University of Kelaniya, LK

TECHNICAL SKILLS

- **Cloud Platforms & Services:** Microsoft Azure (Virtual Machines, Static Web Apps, Functions, Cosmos DB, Azure Communication Services)
 - **DevOps & CI/CD:** GitHub Actions, Git, GitHub, Docker, Linux (Ubuntu)
 - **Web Development:** Python (Django), HTML, CSS, JavaScript
 - **Databases & Storage:** PostgreSQL, MySQL, Supabase, NoSQL (Azure Cosmos DB)
 - **Networking & Protocols:** Cisco Packet Tracer, Wireshark, MQTT, Domain Routing
 - **Security & Cryptography:** Kleopatra, API Gateway Rate Limiting, Environment Variable Hardening
 - **Project Management & Collaboration:** Jira, Azure DevOps Board
 - **Design & Prototyping:** Figma
-

KEY PROJECTS

Serverless Portfolio Architecture (Microsoft Azure) | [GitHub Link](#)

- **Role:** Cloud & Backend Developer
- **Tech Stack:** Azure Static Web Apps, Azure Functions (Python), Cosmos DB, Azure Communication Services
- **Key Achievements:**
 - Engineered a high-performance, cost-efficient, two-tier web application that automatically scales to zero during idle traffic.
 - Hardened API security by building a custom sliding window rate limiter using proxy headers (X-Forwarded-For) to drop spam requests and protect data layers.
 - Resolved runtime SDK errors by refactoring asynchronous execution threads to handle synchronous polling block operations, ensuring zero data-loss during system handshakes.
 - Secured sensitive application endpoints by completely decoupling secrets and connection strings, managing them dynamically via cloud environment configuration containers.

Rebuild – Donation Coordination Platform | [GitHub Link](#)

- **Role:** Backend & Infrastructure Developer
- **Tech Stack:** Django, PostgreSQL, Next.js, TypeScript, Google Gemini AI, Docker
- **Key Achievements:**
 - Co-developed a scalable web platform with a volunteer organization to streamline transparent resource pledging between donors and NGOs.
 - Architected a robust, role-based access control model within a Django and PostgreSQL backend to enforce secure data isolation and processing.
 - Integrated Google Gemini AI to automate structured text extraction from uploaded PDF documents, drastically reducing manual data entry overhead.
 - Containerized the application layers using Docker to ensure seamless environment parity between local development and production configurations.

Smart Building Management System | [Documents](#)

- **Role:** Embedded Systems & Integration Developer (Second Year University Project)
- **Tech Stack:** MQTT, Arduino, ESP32, Wi-Fi Networking
- **Key Achievements:**
 - Designed and programmed the **Switch Control Unit (SCU)**, an IoT edge device utilizing ESP32 and Arduino, enabling smart remote management of industrial lights and fans.
 - Retrofitted legacy building infrastructures by engineering modular hardware units capable of reliable, low-latency communication via the **MQTT protocol**.
 - Executed strict integration testing between localized edge devices and a centralized server, ensuring stable Wi-Fi data transport and seamless execution of automation rules.
 - Contributed to an institutional prototype that successfully validated automated energy optimization, environmental sustainability, and hardware-to-server data synchronization.

CERTIFICATIONS & ACHIEVEMENTS

- **Microsoft Certified: Azure Fundamentals (AZ-900)** — *In Progress*
- **Cisco Networking Academy Linux Essentials** ([Verify](#))
- **Cisco Networking Academy IT Essentials** ([Verify](#))
- **Microsoft Learn Profile** ([Microsoft Badges](#))

SOFT SKILLS

- **Problem-Solving**
- **Adaptability**
- **Collaborative Communication**
- **Customer Focus**
